

# COMPLEX CALSUL

**Enriched Micro-fine Calcium Sulphate for the use in suspension application.**

**Proudly South African State of the art technology from our own environment. Intensive testing nationwide**

## Unique Qualities of Complex Calsul

- The diminished partical size has as result a greater reaction surface.
- The smaller partical size has the advantage of a faster reaction time.
- The effect of 5 kg **Complex Calsul** (<20 micron) is equivalent to that of 2000 kg conventional agricultural lime of 0.7 tot 1.2 mm.
- Any type of agricultural or irrigation equipment may be used any time of the year for the application of **Complex Calsul**.
- It can also be applied to any type of ground or growth medium.

## Advantages of Reactive Lime

- Application is greatly facilitated through the use of a suspension of **Complex Calsul** compared to the conventional method of the application of gypsum.
- Waste as result of adverse weather conditions is greatly averted.
- Use **Complex Calsul** with COA Fert for the reduction of Na<sup>+</sup> levels in soil.
- **Complex Calsul** may be applied in any type of farming, eg. conventional, "no till", minimum till, leased land and pasture.
- Diminished volumes to be handled results in savings as on transport costs, expenditure on time and equipment lay-out.

## Frequently Asked Questions

- Q: How is it possible for smaller particals to present a greater surface?
- A: The area is not calculated for a single partical but is calculated for the total area of all particles for a certain quantity.
- Q: **Complex Calsul** is more expensive per kg than konvensional gypsum but is averred that it is more economical?
- A: The considerable lessened volumes that are involved in the application of **Complex Calsul** results in savings on transport, labour, specialized equipment such as irrigation and also the elimination of waste through adverse weather conditions.
- Q: How can I be sure that the prescribed application of **Complex Calsul** will result in the same or better outcome than my konvensional liming programme?
- A: Your **Complex Calsul** requirements can be ascertained and applied on the same basis as for your normal fertilizer needs.

## Active Ingredients

Calcium	(Ca)	.....	230 g/kg
Sulpher	(S)	.....	140 g/kg
