

A product of

# Blue Ocean Agri CC

Registration Number 2005/158962/23

# COA Fertigation

For use with fertigation/irrigation equipment

# COA Soil

For use with liquid NPK ferts  
(no “nozzles”)

**Proudly South African  
State of the art technology  
from our own environment.  
Intensive testing nationwide**

**A unique combination of natural components that occur in the “organic acid” group.**

**The increase of aforementioned components, have the following effects:**

- **Increased bio-availability of plant nutrients.**
- **Stimulates root development.**
- **Improved germination and seedling development.**
- **Reduces Phosphate ( $PO_4^{---}$ ) binding through  $Ca^{++}$  as  $(Ca)_3(PO_4)_2$ .**
- **Buffers the pH of the soil and protects the seedlings and young plants against the high salt index of chemical fertilizer.**
- **Increases CEC of growth medium as well as microbiological activity.**
- **Healthier root zone.**
- **Improves soil texture and structure.**
- **Increases  $Ca^{++}$  uptake through higher molecular weight of organic compounds.**
- **Compatible with N:P:K fertilizers.**

**Dosage: 2 -10lt/ha depending on crop and clay %**

**Packaging: 5lt, 25lt, flobin(1 000lt)**
