

A product of

Blue Ocean Agri CC

Registration Number 2005/158962/23

COA Foliar

A unique combination of natural components that occur in the “organic acid” group.

**Proudly South African
State of the art technology
from our own environment.
Intensive testing nationwide**

Use the product in combination with plant nutrients and/or crop protection products.

- **Improves the uptake through “waxy layer” of leaf.**
- **Increases chlorophyll levels for better photosynthesis.**
- **Supports plant against possible negative impact of crop protection products by acting as a buffer.**
- **Carbon activation (-COOH groups) for better uptake of plant nutrients.**
- **Increased production of nutrient translocation enzymes.**
- **Increased concentration of plant sugars (Brix).**
- **A balance between photosynthesis and respiration for optimal carbohydrate synthesis.**
- **In most cases the element’s uptake is translaminar through total plant surface area.**

Dosage: 1lt + 4kg N:P:K in solution (or Urea Phosphate 38%) or 1-2lt/ha with crop protection products.

Packaging: 5lt, 25lt, flobin (1 000lt)
