

A product of

# Blue Ocean Agri CC

Registration Number 2005/158962/23

# COA Glophosate

**COA Glyphosate is a combination that can be used with glyphosate to protect the crop from the associated abotic stress from the sprayed glyphosate.**

**Proudly South African  
State of the art technology  
from our own environment.  
Intensive testing nationwide**

**The normal symptoms of Mn shortage (yellow leaf on Soya) are avoided by the protection of the divalent cations of the crop. The amino acid and enzyme production of the crop is less affected. These factors ensure that the abotic stress does not turn into metabolic stress during the time it takes to "recover" from the spray. The target plant is more aversely affected and therefore presents a better knockdown rate.**

**Dosage: 1-2lt/ha depending on crop and quantity glyphosate sprayed.**

**Pack size: 5lt, 20lt, flobin (1 000lt)**
