

Complex SuperCa

A unique Ca source with high uptake rate. Immediately plant available and can be applied as part of a specific plant program, or as a stand alone product.

Application through fertigation or foliar sprays.

Compatible with all plant nutrients, except water soluble Phosphates.

Contains no NO_3^- , Cl_2^- or SO_4^{--} .

Due to the fact that Ca plays such an important role in plant health, sufficient Ca levels will support the following functions:

- Plays important role in photosynthesis - ATP & ADP.
- Strengthening of cell walls.
- Important element for endophytic microbes in the soil.
- Physical protection against mechanical damage.
- Together with Calmodulin (Ca dependant enzymes) it has essential functions inside the cell:
 - o Polarity
 - o Secretions
 - o Growth
 - o Cell division
 - o Gene expression (RNA)
- o Ca enzymes for protection against fungi.

Packaging: 5lt, 20lt
